Revenue Impact Post 5G Upgrade

After validating revenue performance before and after the 5G rollout, a revenue decline of **₹80 million** (approximately **0.5% decrease**) was observed following the upgrade.

Revenue Per User (ARPU) Improvement

Despite the overall revenue dip, **Revenue Per User increased by ₹20**, indicating improved monetization per active subscriber post-5G launch. Upgradation works well across the users since the higher plans also purchased due to 5G bandwidth which increases the revenue per user.

Subscriber Conversion Challenge

The revenue decline appears to be primarily driven by a reduction in total active users. A possible contributing factor is the **slow conversion of 4G handset users to 5G-enabled devices**, impacting adoption rates.

Monthly Revenue Recovery Trend

Revenue showed a **comparative increase over 4G performance during the months of August and September**, indicating early signs of post-launch stabilization and customer uptake.

Unsubscribed Users Post Upgrade

Approximately **7 million users unsubscribed following the 5G upgrade**, which likely contributed to the short-term revenue dip. We may also concentrate whether the users are getting good 5G bandwidth to ensure the Subscription dip.
